Overview

Have you joined in the fun and excitement of downloading music files from the Internet? Have you collected hundreds of music files? If so, the big question is... How much of your precious time will you spend organizing those music files?

The answer is "very little time" with the award-winning file management tool, Tag&Rename.

Tag&Rename is a handy management utility designed for mp3, wma, ogg, mp4 (m4a, m4p) and many other music files. With Tag&Rename you can quickly and easily rename your music collection using the embedded tag data within music files, write new or edit existing tag information, create tags based on file names, get song information from the freedb server, or import it from the amazon.com. Tag&Rename supports all popular tag standards used by software and hardware players. This program is a very useful playlist editor with recursive subfolder support and a unique file list which show all your files in a real folder structure.

Tag&Rename is the only music organizer and tag editor which supports all popular file formats:

- **.mp3** - **ID3v1**, **ID3v1.1**, **ID3v2.2**, **ID3v2.3** and **ID3v2.4** tags
- **.wma**, **.asf** and **.wmv** (Windows Media) - **Windows Media** tags
- **.m4a**, **.m4b** (Apple iTunes aac and lossless audio files), **.m4p** (protected files from Apple Music Store), **.mp4** - **iTunes** tags
- **.ogg**, **.flac** and **.spx** (Speex) - **Vorbis Comments**
- **.mpc** (MusePack), **.ape** (Monkey's Audio), **.ofr** (Optim Frog), **.wv** (Wav Pack) and **.tta** (True Audio) - **APEv1** and **APEv2** tags
- **.wav** – **ID3v2** tag in 'id3 ' RIFF chunk
- Tag&Rename provides full support for the following tag frames in all supported music formats: Artist, Album, Title, Year, Genre, Comment, Composer, Original Artist, Copyright, URL, Encoded by, Track #, Disc #, Rating, Mood, BPM, Part of a compilation, Cover art, Lyrics, Album Artist, Conductor, Lyricist, Original Lyricist, Label, Remixed by, Radio station name, Audio file information web page, Artist web page, Audio source web page, Radio station web page, Buy CD web page, ISRC #, Catalog #.

Key features:

- **Rename music files according to tag information:** Easily rename files using templates individually or whole directories at a time, preview changes before renaming or undo the last renaming process, rename the folder (including subfolders) containing your music files, and manually edit files and folders names.
- **Multi-file or manual tag editors:** Edit tags for multiple or single files, add cover art to all album files with a few clicks, and fill in tag fields using the file name.
- **Freedb support:** Get tag information for full music albums automatically in seconds using the freedb Internet server.
- **Amazon support:** Search and import album information and cover art from the amazon.com server to file tags (all Amazon servers supported: amazon.com, amazon.co.uk, amazon.de, amazon.fr, amazon.ca and amazon.jp).
- **Text case conversion functions:** Convert case or capitalize the first letter of each word within file names or tags.
- **Tags synchronization wizard:** Synchronize between ID3v1 and ID3v2 tag data.
- **Export wizard:** Export your music information into any format - csv, xml, html and tab delimited text.
- **Full Unicode support:** Supported on Windows NT/2000/XP/2003/Vista.
- **Rename music files folder:** Rename according to tag information.
- **Full support for file drag and drop:** Drag and drop file just like in Windows Explorer.
- **M3u play lists:** Create m3u playlists (or m3u8 UT8 encoded Unicode playlists) using the unique Quick Save Playlist feature.
- **Play music files:** Listen to your music files using your favorite music player.
- **Windows Explorer shell extensions:** Add Tag&Rename to the context menu of MS Explorer so that you can access it faster (right-click mouse) from the MS File Manager.

Tag&Rename is very easy to use and highly configurable. In addition, it has helpful notes and descriptions of menu commands built into the interface to help speed up your understanding and use of the program.

What's new in this version?

Tag&Rename v3.3.5 (03/22/2007):

- Tag&Rename "Filters" now use MS-DOS wild cards, i.e. you can use masks like: `"*some text*"`, `"?? text*"`, etc.
- now you can change files rating from files list with one mouse click
- "Open with Tag&Rename" Explorer shell extension now correctly open folders with Unicode characters in names
- "Replace spaces with underscores" and "Replace underscores with spaces" options was added back
- added "Rating" field in "Filter" function
- added "Channels" option into "Export Wizard"
- fixed not worked web import in some systems
- fixed bug when Tag&Rename write incorrect flags into APEv2 tag header and footer
- fixes in ID3v2 tags reading

Tag&Rename v3.3 (12/22/2006):

- added butch functions to work with folder.jpg files
- now Tag&Rename save Mood frame in ID3v2 tags compatible with Windows Media Player
- fixed bug in APEv2 tag wring (incorrect tag size in tag header)
- some minor fixes

Tag&Rename v3.3 rc 1 (12/10/2006):

- fixed "EOut of system resources." bug on some systems
- many minor fixes

Tag&Rename v3.3 beta 2 (12/02/2006):

- added support for cover art in flac files (PICTURE METADATA BLOCK)
- added support for cover art in ogg and speex files (base64 encoded)
- added "Composer" field in filters
- added .m4v files extension support
- while renaming music files Tag&Rename now also rename .cdg files with similar to music files names
- now Tag&Rename write mp3 and wma rating compatible with Windows Media Player (if in WMP enabled option "Maintain my star rating as global ratings in the media file")
- added support for "Remixed by" tag field
- added support for .m3u8 play lists - Unicode UTF8 encoded
- added many auto update ID3v1 tag settings in program options -> "Advanced"
- added "DJ style tag editor" option - show "Label" and "Remixed by" fields in main tag editor tab)
- added check for update function
- initial Windows Vista support
- fixed bug in m4a tags reading (some genres reading)
- fixed incompatibility problem with NVIDIA nView
- a lot changes in program files list
- many minor fixes and improvements

Tag&Rename v3.3 beta 1 (09/29/2006):

- added wav files support (MUSICMATCH Jukebox style - ID3v2 tag added to 'id3 ' wav chunk)
- it is possible to select now what information need to be saved from freedb
- now Tag&Rename status bar show size of selected files in program files list
- improved ID3v2.4 tags support (can correctly read any kind of 2.4 tags now)
- added full read support for ID3v2.4 UTF8 encoded tags
- Album Artist field in mp4 tag now compatible with iTunes 7
- Winamp control now work with latest Winamp versions
- removed additional PCDJ frames support
- fixed bug with "Quick Save Playlist" function handling playlist name masks containing `"../"`
- added "Compilation" column into file list

For full program history see the Whatsnew.txt file in the Tag&Rename folder.

Renaming files

With Tag&Rename you can quickly and easily rename your music files according to their tag information. It's as simple as 1-2-3! Just open the folder containing files to rename, configure the rename options and click the **Rename** button.

To open a folder containing your music files, select it in the Tag&Rename folders tree. Now you are ready to begin renaming your favorite music files!

Note: The following functions are driven by pre-existing tag information. If files do not contain tag data, you cannot rename them with the **Rename file** option. Instead, you may use the Filename to tag option to generate tag data based on the file name. (See **How to get tags from file name** for more information.) Otherwise, you may manually enter the ID3 tag information using the multi-file or manual ID3 tag editor, using freedb, or Get album title from amazon.com, if you have the full album.

Rename files options:

Tag&Rename Rename Files tab.

File name mask - This is the main rename option where you may fully configure filenames using variables and/or any text. For example, if you key in the %1 - %3 - %2 variables (in that order) in the "File rename mask" box, it will produce filenames with "Artist - Album - Title.mp3". You will find the following **Rename variables** listed on the user interface for your convenience:

Rename variables	
%1	Artist
%2	Title
%3	Album
%4	Year
%5	Genre
%6	Track #
%7	File name
%8	File number
%9	Comment
%0	Bitrate
%t	Play time
%b	BPM
%#	Disc #
%or	Orchestra
%co	Conductor
%cp	Composer

Note: For easy typing your rename mask (variables), you may use the **Mask Editor**. Click the button next to the file name mask list to open it. With the **Mask Editor** you can easily create, preview and save your masks for future use.

Result preview – Here you can see real time preview results of the rename mask you defined.

Case – Checking this box enables the UPPERCASE, lowercase, Capitalize First Letter (of each word) or Capitalize first word functions.

Note: Keep in mind that you may substitute variables for any text you choose. If you want to create a folder structure, you may use "\" in the rename mask as in the example below:

Rename mask:	%1 - %2\%8 %2
Result:	c:\mp3\Artist - Album\01 Title.mp3
	c:\mp3\Artist - Album\02 Title.mp3

Rename files buttons:

Test – Allows you to preview file name changes in a "before & after" split window before committing to the rename process.

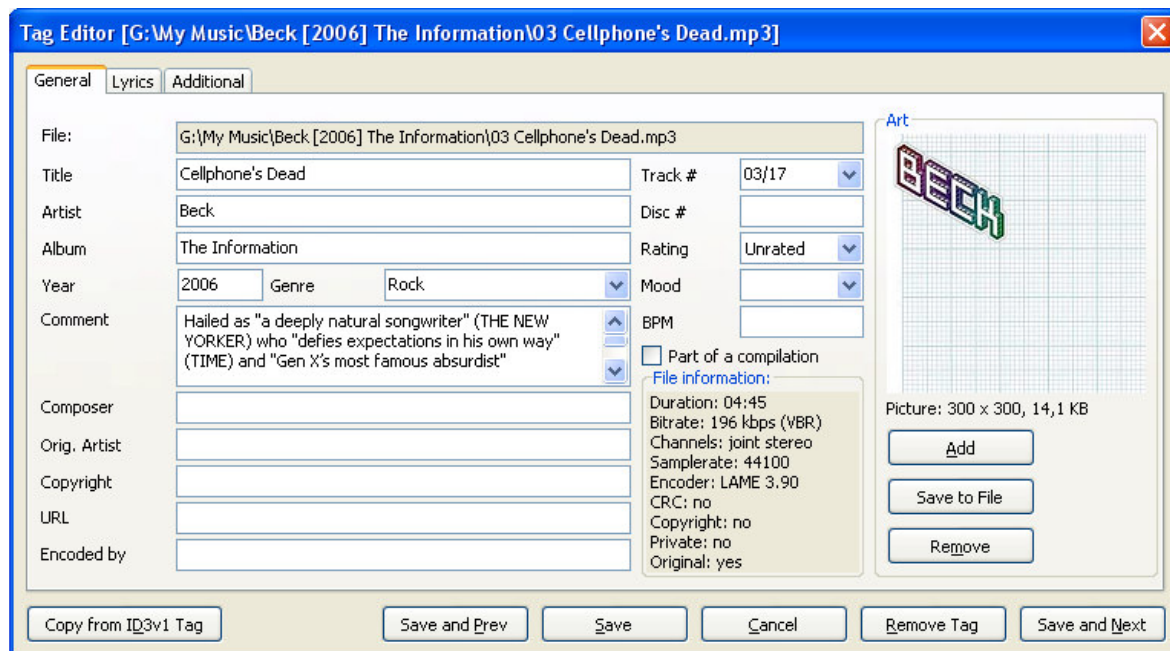

Rename – Will rename selected files according to the selected options.

Undo – Will undo the last renaming process.

Editing tags

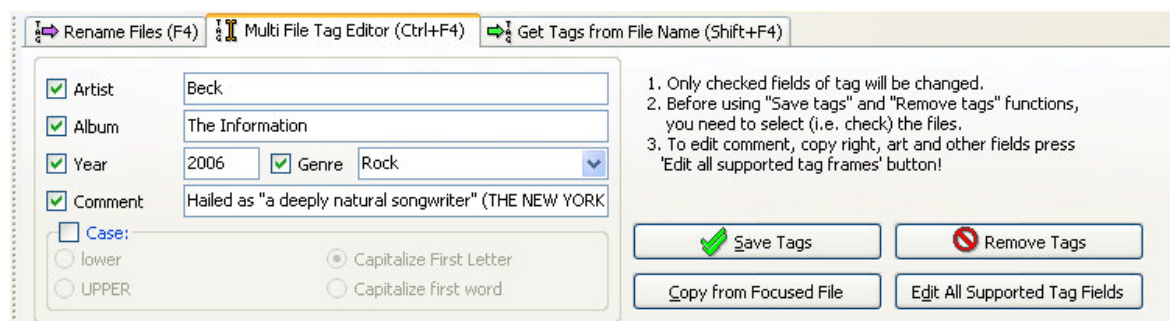

There are two ways to edit tags: manually or multi-file.

- To edit a tag manually, double-click a file in the file list and edit the tag in the pop-up window. The pop-up window shows file information (bitrate, play time, etc.) and allows you to perform the following commands:
 - Save** changes of selected files
 - Cancel** command
 - Remove tag** from selected file
 - Save changes to selected file and edit **next** or **previous** file

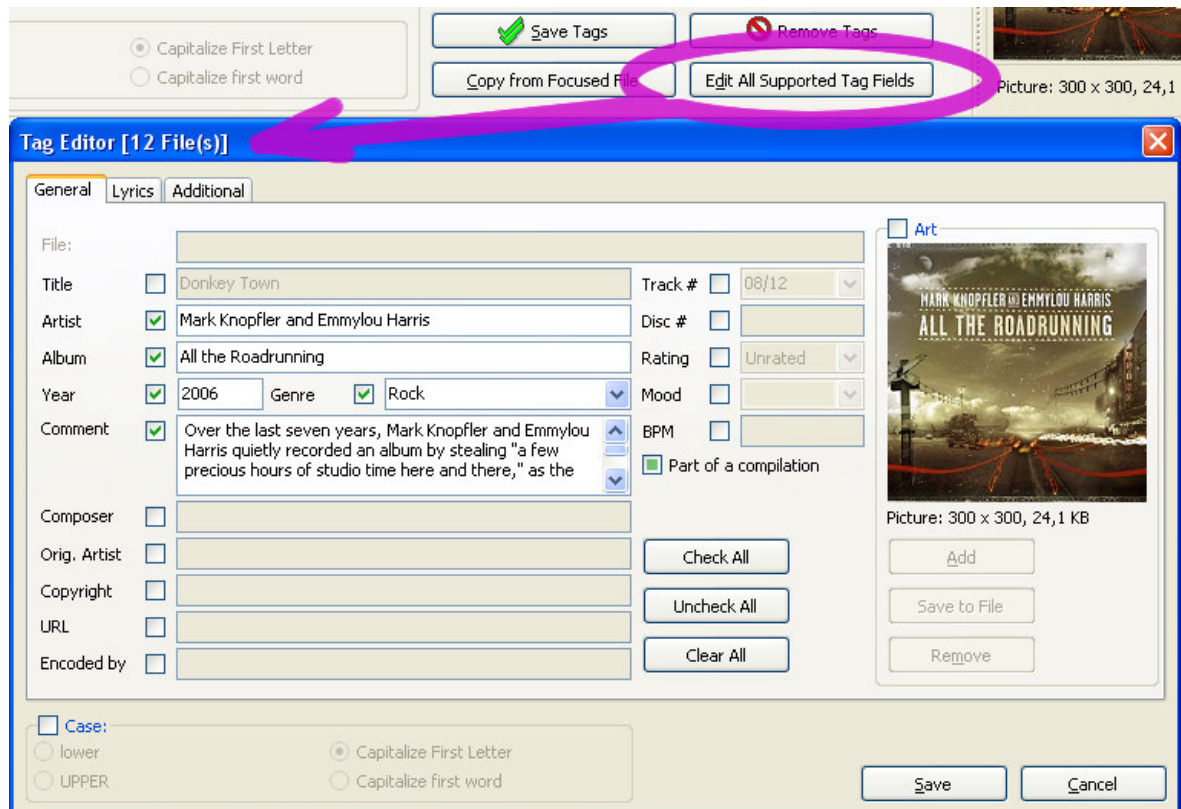

Tag&Rename Manual Tag Editor window.

- Under the **Multi File Tag Editor (Ctrl+F4)** tab you can easily write, create or remove tags from selected files. Click on the white boxes (to the left of the tag field names) that you want to edit, fill-in the appropriate information and click the **Save Tags** button. You may also enable one of the case functions, which will convert all tag fields to your case preference.

Tag&Rename Multi File Tag Editor options tab.

Note: To edit all additional supported tag fields in selected files, click on the **Edit All Supported Tag Fields** button in the **Multi File Tag Editor (Ctrl+F4)** or use the **Ctrl+F5** hotkey.

Tag&Rename All Supported Tag Fields in the Multi File Tag Editor.

Multi File Tag Editor buttons:

Save Tags – Save changes to selected files.

Remove Tags – Remove tag information from selected files. (This operation cannot be undone.)

Copy from Focused File – Click this button to copy tag information from the file with the focus to Multi File Tag Editor fields.

Edit All Supported Tag Fields – Edit all tag fields supported by Tag&Rename.

Note: Keep in mind that in ID3v1 tags mode, you are limited to a maximum number of characters for each tag field name:

Maximum Lengths

Title = 30 characters (1 character = 1 byte)

Artist = 30 characters

Album = 30 characters

Year = 4 characters

Comment = 30 characters

Genres in ID3v1 tags are stored as a 1-byte index, so it's impossible to add your custom genres to the tag.

How to get tags from file names

If you have files without tags, you can get them from file names containing information about the artist, title, etc. Under the **Get Tags from File Name (Shift+F4)** tab, configure the file name to the tag options and click the **Write Tags** button.

File name to tag options:

Tag&Rename get tags from file name options tab.

File name mask - In this field you must provide the file mask variables. For instance, if your files are similar to the below examples..

01 Artist - Title.mp3

02 Artist - Title.mp3

03 Artist - Title.mp3

You may want to type in this file name mask: **%6 %1 - %2**

File name variables	
%1	Artist
%2	Title
%3	Album
%4	Year
%5	Genre
%6	Track #
%9	Comment
%b	BPM
%#	Disc #
%or	Orchestra
%co	Conductor
%cp	Composer
%d	Skip part of the file name

Note: If the folder name contains some track information, you may use the "\" symbol in the file name mask. For example, if your files are located in a folder with an "Artist - Album" name, you may use this file name mask: **%1 - %3\%2**

Case – Enables case functions from which you may select one.

Get tags from file names buttons:

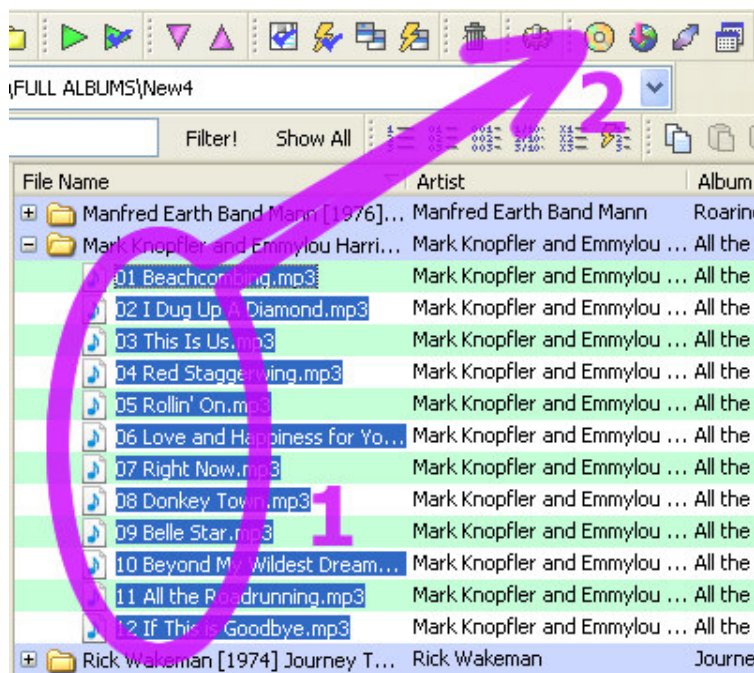

Preview – Allows you to preview tag changes before committing to the write tags process.

Write Tags – Click to write the tags of selected files.

How to get song information using freedb

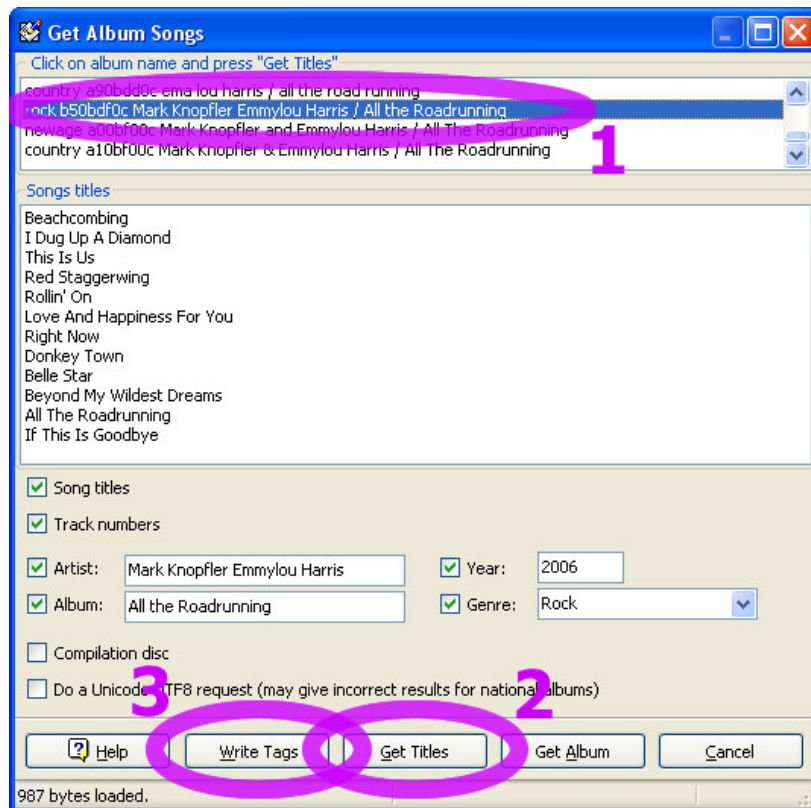

If you have full albums as music files without tags and you know in which order the tracks appear on the original CD, you may use the freedb functions. You must connect to the Internet for this function to work properly.

1. Connect your PC to the Internet.
2. Select (or check if the **Use easy files selection** option is disabled) files from a single album only.
3. Sort selected files in the order they appear on the CD using the **Move file up** and **Move file down** functions, hotkeys (**Alt + Up**, **Alt + Down**), or **drag and drop**. (You can also use the **Sort by file creation time** function in the **View** menu.)

Tag&Rename file list with selected files from one album.

4. Click **Get album titles from freedb**.
5. If Tag&Rename finds the album (usually in a manner of seconds), the album(s) information should appear in the **Get Album Songs** window. Now you need to select an album in that window and click the **Get Titles** button. This will load the selected album track titles so they appear in the **Songs titles** window. If they do, click the **Write Tags** button to transfer and save information to the files tag.

Album titles loaded from freedb.

Note: Should information only appear in the top window, click on the information and then click the **Get Titles** button. Now, click the **Write Tags** button once the song titles appear.

Note: The freedb uses a CD's original song order and track time as two parameters (among others) to retrieve song information. Tag&Rename attempts to emulate these parameters to get the song information from the freedb server. If ANY changes were made to the leading or trailing silence of MP3 track times with a MP3 sound editor for example, then the album CANNOT be found using freedb.

Tip: If every full album is stored in it's own folder, then you may use **Get folder album titles from freedb** function in file list folders popup menu. This will save a lot of time. (Don't forget to enable **Search subfolders** option in the **Main Menu -> View**)

Tag&Rename file list with folder popup menu.

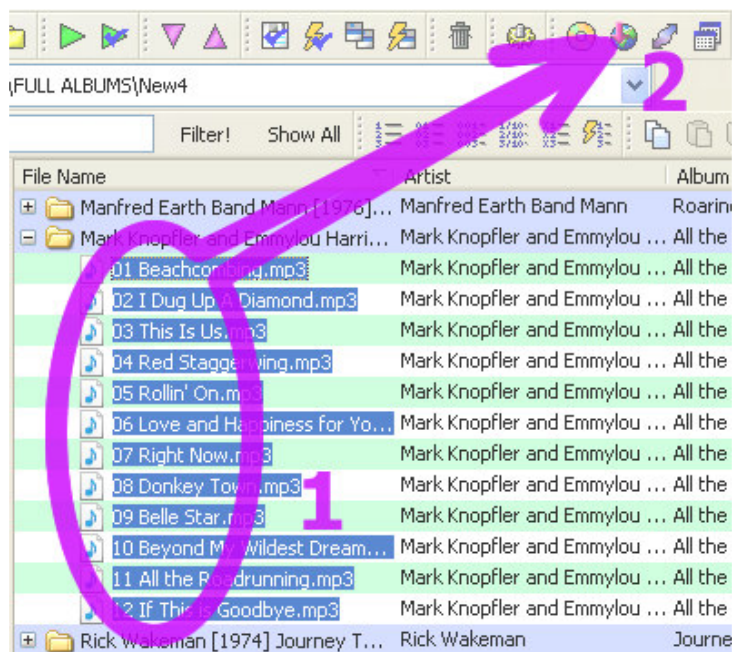

Keep in mind that freedb will only retrieve the album, artist, song and track number information.

Tip: If you do not know the song order of an album, you may use **Get album information from amazon.com**.

How to get album information from amazon.com

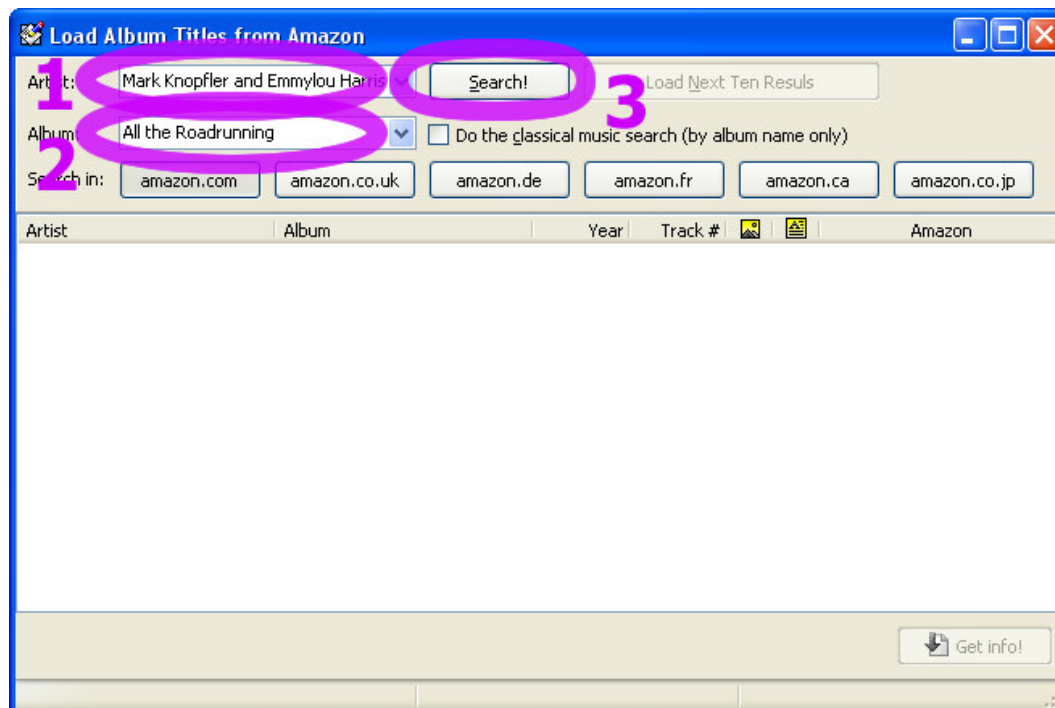

If you have full albums without tags and you know the album title and author, you can use amazon.com to get the tag information you need. You must connect to the Internet for this function to work properly.

1. Connect your PC to the Internet.
2. Select files from one album.

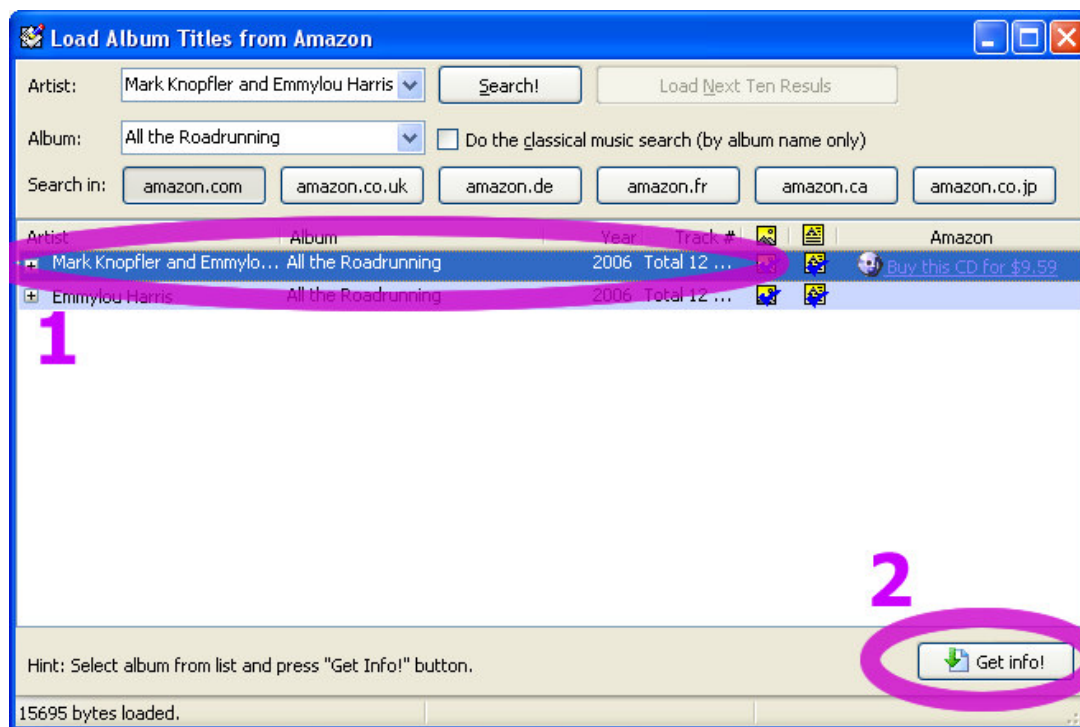

Tag&Rename file list with selected files from one album.

3. Click **Get album titles from amazon.com**
4. In the window that opens, fill in the **Artist** and **Album** fields (if not filled automatically), and select the amazon mirror you want to **Search in**.
5. Click the **Search!** Button.

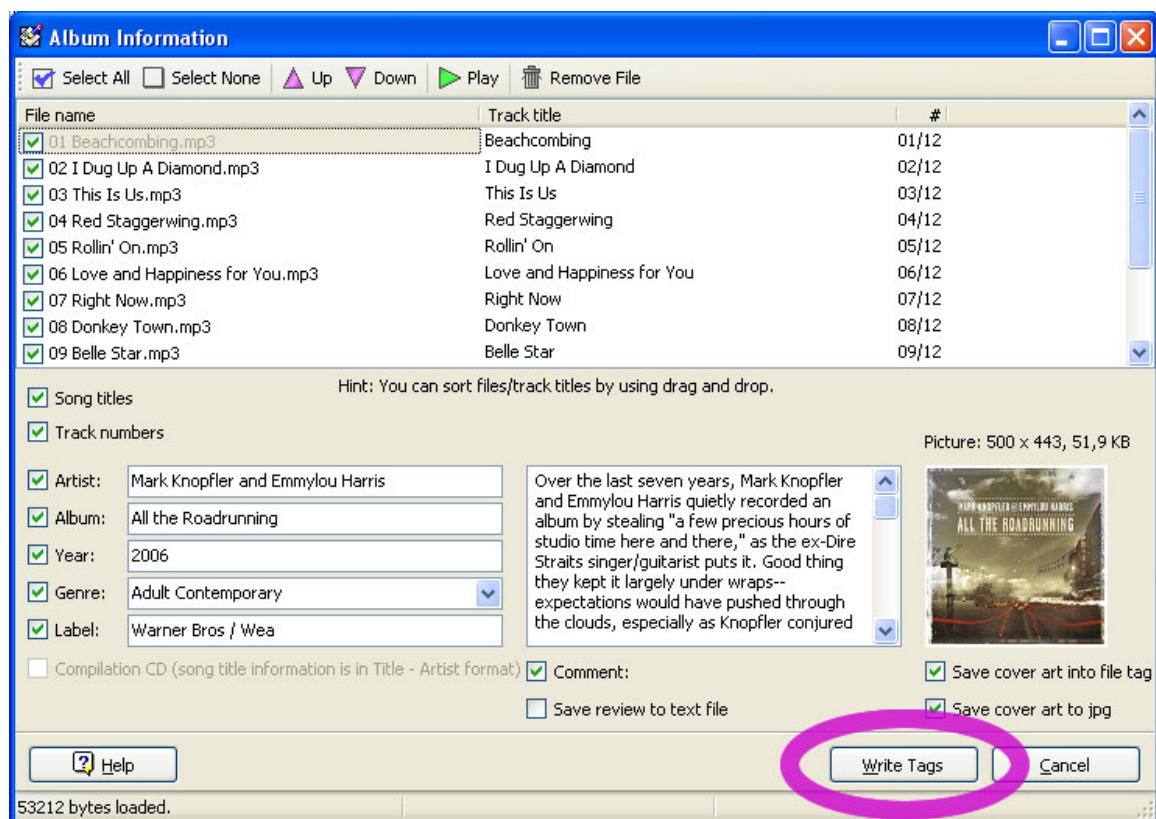

Load Album Titles from Amazon window.

6. After Tag&Rename has found the albums you requested, select an album from the list and click the **Get info!** button.

Load Album Titles from Amazon window with search results.

7. Sort files and titles using the move file **Up** and move file **Down** functions or **drag and drop**.
 8. Select the information you want to save.
 9. Click the **Write Tags** button.

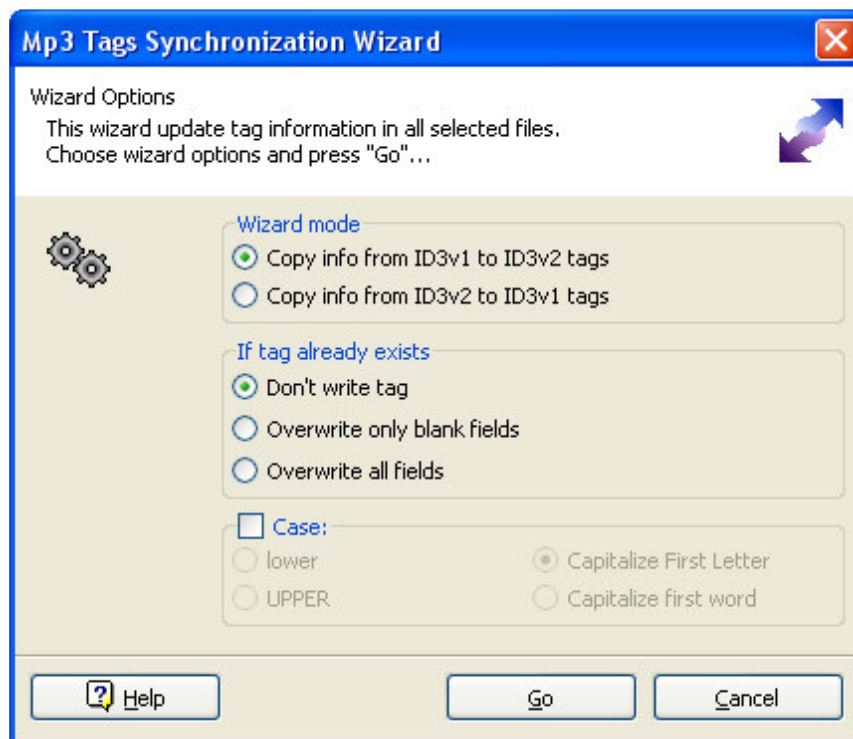

Album Information window with loaded albums.

Tags synchronization wizard

With the Tags Synchronization Wizard, you can synchronize mp3 file information between ID3v1 and ID3v2 tags.

To synchronize tag information:

Tags synchronization Wizard window.

1. Select files that you want to update.
2. Click the **Tags Synchronization Wizard** button in the Tag&Rename toolbar.
3. Choose wizard options and click the **Go** button.

Tags Synchronization Wizard options:

Wizard mode – Select the tag type that contains the correct information and which tag you want to update.

If tag already exists – Choose the option you prefer if an updated tag already exists in the file.

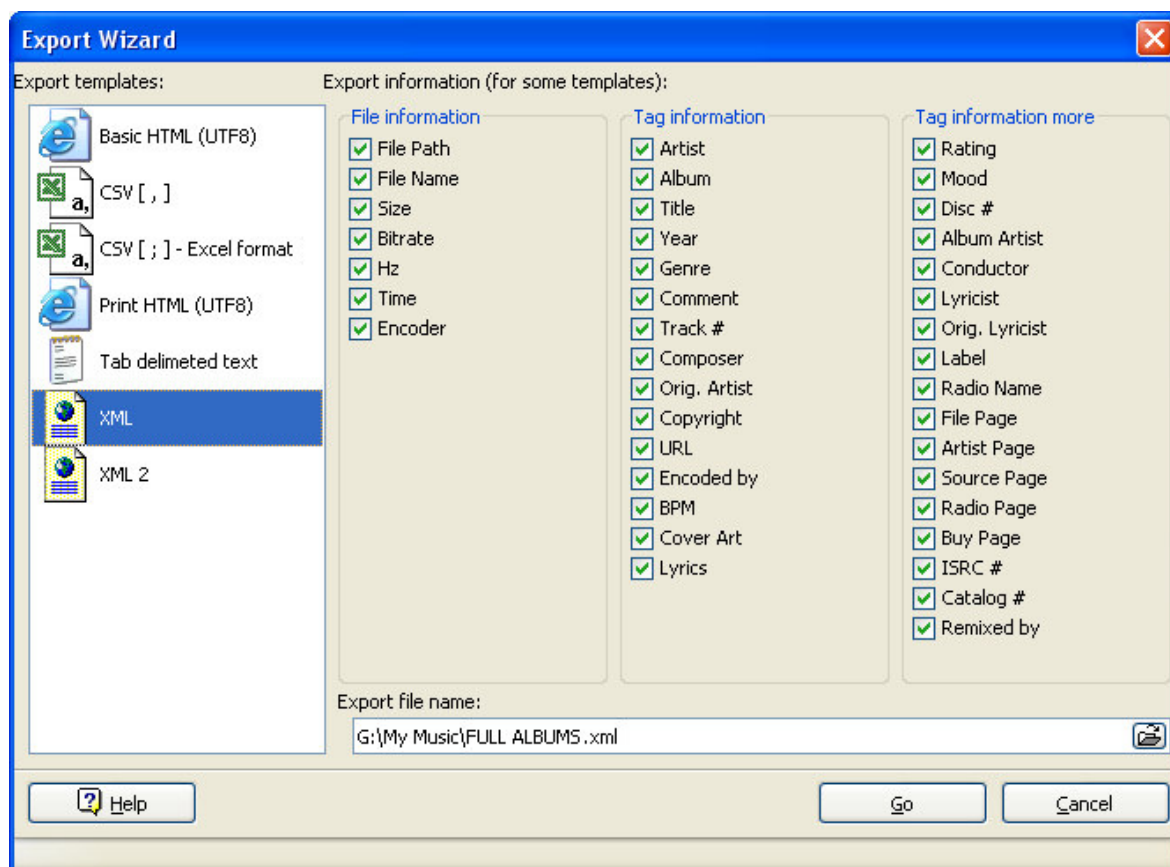

Case – Check the Case box if you want to use case options.

Note: In the unregistered version of Tag&Rename, this wizard processes only the first 10 selected files in the file list.

Export wizard

With the Export Wizard, you can export your music library information to html, xml, csv or text and then print it or export it to any database.

To use the Export Wizard:

Export Wizard options.

1. Select the files you want to export.
2. Click **Export Wizard**.
3. Choose the wizard options you want and click the **Go** button.

Export Wizard options:

Export templates – Select the export format.

Export information – Select the tags and file information you want to export. (These options are disabled when you export to html.)

Export file name – Choose a name for the file you will export to.

ID3v2 tags tips

Tag&Rename provides full support for ID3v2 tags including support for ID3v2.2, ID3v2.3 and ID3v2.4 (ANSI, Unicode and Unicode UTF8 encoded tags). Tag&Rename always writes ID3v2.3 tags because of compatibility with other software/hardware.

ID3v2 tags benefits:

- No string-length limitations
- Ability to add custom **Genre** fields
- Cover art
- Ability to save Unicode information into ID3v2 tags (see **Program options** -> **Tags**)

Note: ID3v2 tags are stored in the beginning of the mp3 file. This is why it takes more time to write it the first time. (Tag&Rename needs to move all the file data.)

For more information about ID3v2 tags go to: <http://www.id3.org/>

Tag&Rename tool bar

The following functions are located on the toolbar. When you place your mouse pointer on a menu command, the status bar at the bottom of Tag&Rename displays a description of what that command does.

Tag&Rename main toolbars.

	Select all files – selects all files in the files list
	Select none – selects no files in the files list
	Invert selection – inverts the selection of files in the files list
	Select highlighted files – selects all highlighted files in the files list (only when Easy files selection mode is disabled)
	Deselect highlighted files – selects no highlighted files in the files list (only when Easy files selection mode is disabled)
	Refresh – refreshes the Tag&Rename file list
	Find... – opens a standard find dialog to search for files in which tag information or the file name contains text you specify
	Search subfolders – searches subfolders for music files (in the file list, you will see the folder structure)
	Flat file list – the program file list shows only files and hides the actual folders structure
	Expand all folders – expands all folders in the file list (only enabled when folders exist in the file list)
	Collapse all folders – collapses all folders in file list (only enabled when folders exist in the file list)
	Edit file tag – edit a tag in a file focused in the program file list
	Edit file name – change a file name manually in the Edit file name pop-up window. Tag&Rename automatically adds the extension to the file name
	Rename current folder – rename the current folder in the Folder rename pop-up window according to a file tag within the directory
Tip: Rename current folder is handy if you have a full music album in a folder and the tags already include the artist and album information.	
	Play file – plays a music file on your default music player
	Play selected files – generates a temporary playlist from selected files and plays it on your default music player
	Move file down – move a file down in files list
	Move file up – move a file up in files list
	Save selected files to "*.m3u" playlist – name and save the playlist of selected files to the directory of your choice
	Quick save playlist – save the playlist of selected files (no naming option provided)
	Save all files to "*.m3u" playlist – name and save the playlist of all files to the directory of your choice
	Quick save playlist – save the playlist of all files (no naming option provided)
Tip for Quick save playlist options: Tag&Rename can save playlists to the current directory with a default file name of the artist and album using the highlighted or first such item within the directory music file tag information.	
Select the Configuration option to change the default settings of the playlist name (artist & album) for all or selected files. For more information see the Playlists topic in Customize Tag&Rename .	
	Delete files – delete selected files. Tag&Rename sends the files to the Recycle Bin. Use the Restore feature of the Recycle Bin if you accidentally delete files
	Options – see the Customize Tag&Rename section

	Get album titles from freedb – see the How to get song information using freedb section
	Get album titles from www.amazon.com – see the How to get album information from amazon.com section
	Tags synchronization wizard – see the Tags synchronization wizard section
	Export wizard – see the Export wizard section
	Copy tag – copies a tag from a highlighted file so you can paste it into another file or group of files
	Paste tag – paste a tag into a highlighted file
	Paste tag to all selected files – paste a tag to all selected (checked) files
	View help – view the Tag&Rename help file
	About Tag&Rename – view the About box
	Format track numbers to x
	Format track numbers to 0x
	Format track numbers to 00x
	Format track numbers to xx/xx
	Format track numbers to xx
	Auto fill track numbers

Tag&Rename "Folder" and "Mode" toolbars.

	Open folder – click to open a new folder in Tag&Rename
	Up – click to open the folder one level up from the current folder
	History – show a menu of the last accessed folders
	All mode – work with all music formats/tags supported by Tag&Rename (in mp3 files you can edit ID3v2 tags only)
	ID3v1 mode – work with ID3v1 mp3 tags
	ID3v2 mode – work with ID3v2 mp3 tags
	Wma mode – edit wma, asf and wmv files in this mode only
	Ogg/Flac mode – view and edit ogg and flac files
	Mp4/M4a mode – work with mp4 and Apple iTunes aac (m4a, m4p) files
	APEv2 – work with files which use APE tags: Monkey's Audio, MusePack, Optim Frog and Wav Pack

Using filters

By using filters, you can show/hide files in the Tag&Rename file list according to its tag contents. To show the filter toolbar, select **Filters** in the Tag&Rename main menu. Then select **View -> Toolbars**. You can filter files by most tag frames information, tag existence, file name and "Low bitrate" (see also **Low bitrate** settings in **File list topic**).

Filters toolbar.

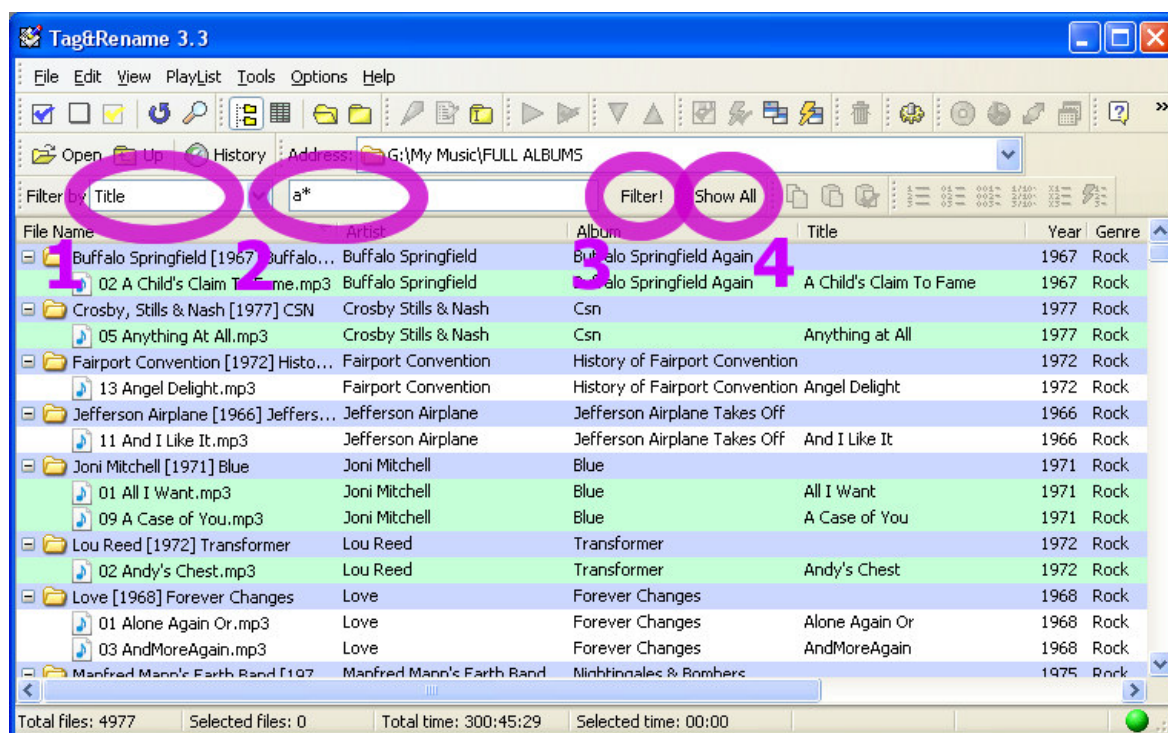

To filter files, select the field you want to **Filter by** from the list ("Artist" in the example), enter text to find ("a*" to find all artists starting with "a") and click the **Filter!** button. This will hide all files which don't comply with the filter condition. To show all the hidden (filtered) files, click the **Show All** button.

Here is some filter usage examples:

a* find all texts starting with "a"

text find all texts containing "text"

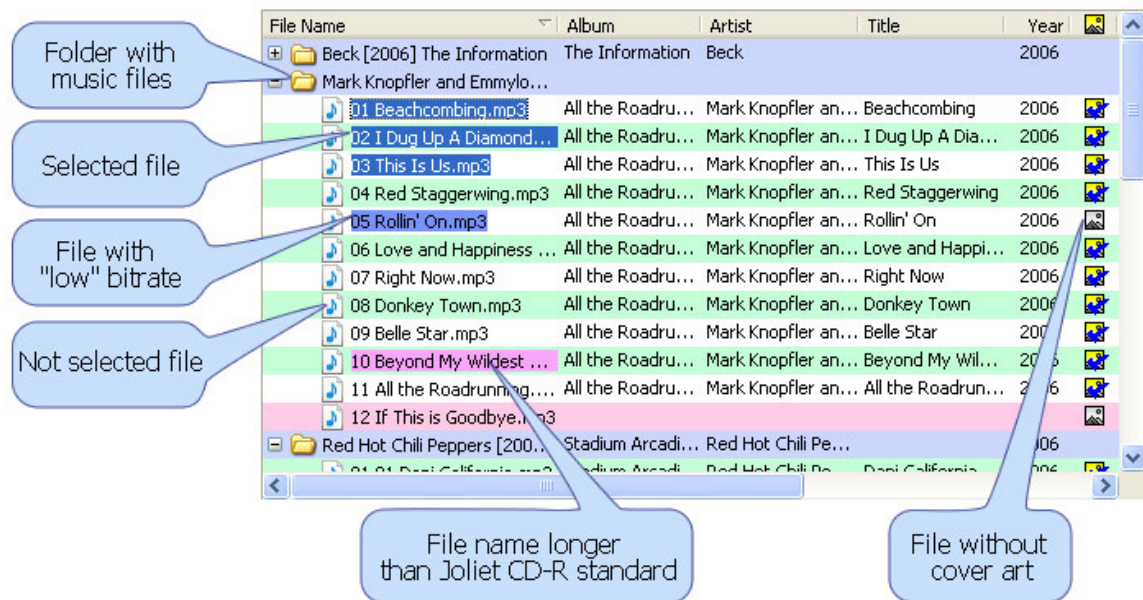

*text find all texts ending with "text"

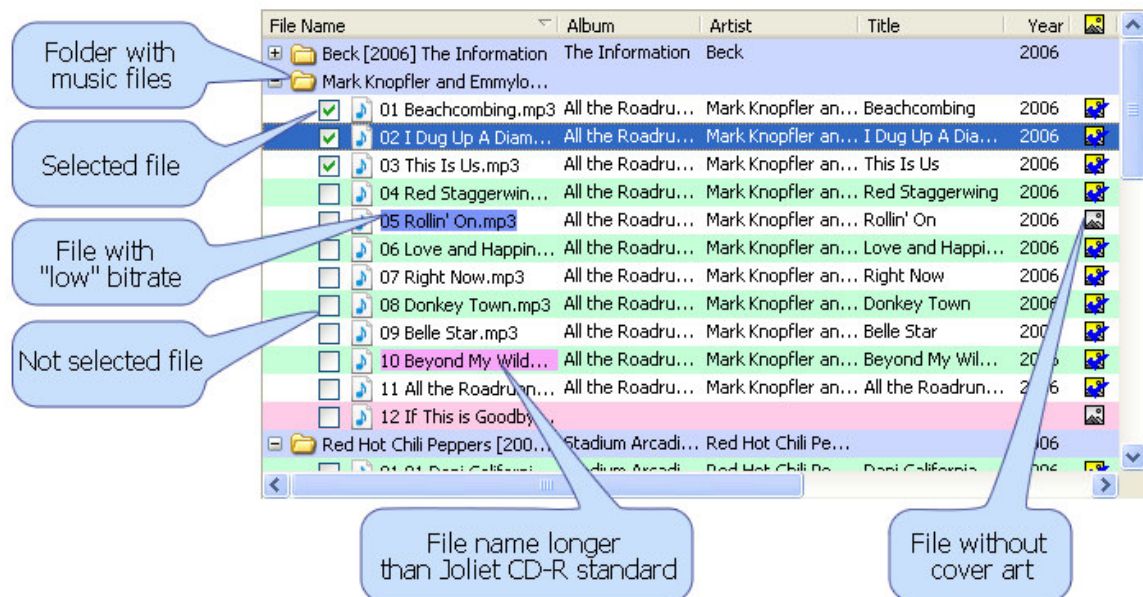

Result of filters usage.

Program file list

In the examples below, you can see additional information about the Tag&Rename file list:

Tag&Rename file list with **Use easy files selection** option enabled.

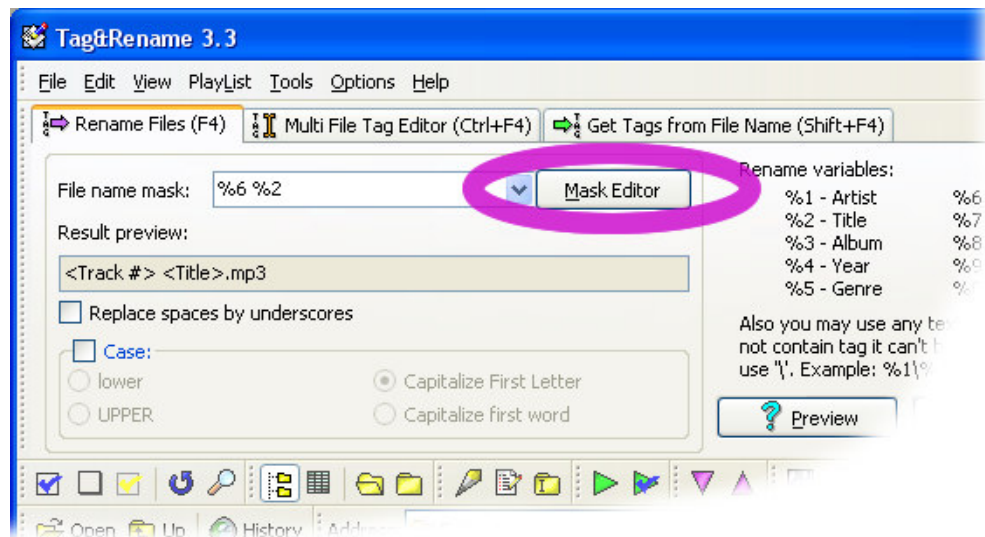

Tag&Rename file list with **Use easy files selection** option disabled.

All Tag&Rename file list features can be controlled in the **File list** and **File list columns**.

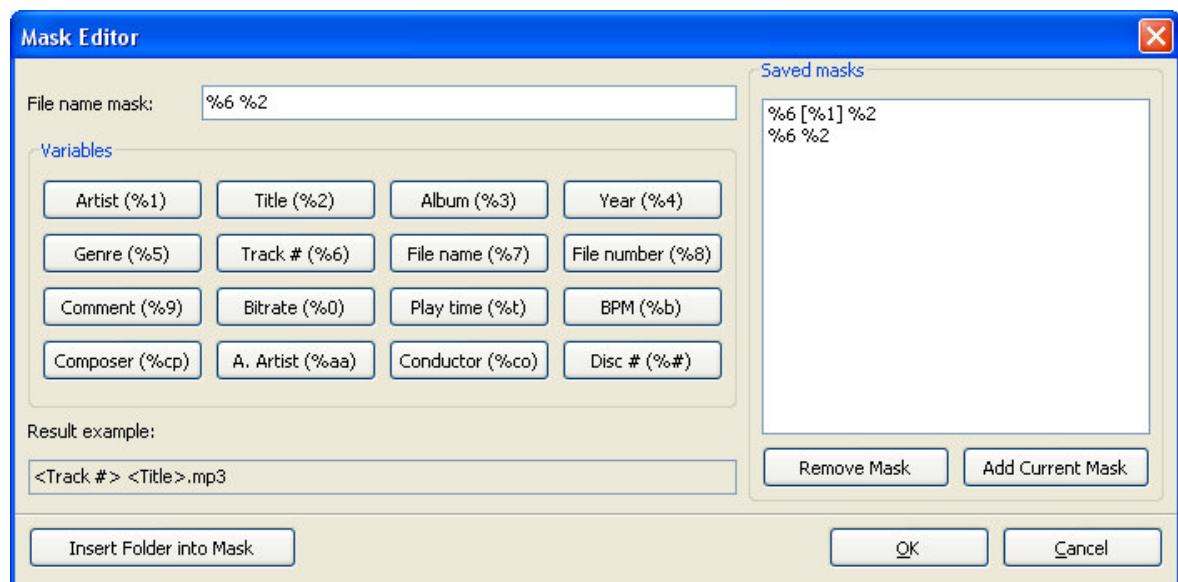

Mask editor

Use the **Mask Editor** to easily create, preview and manage file and folder name masks. Click the **Mask Editor** button to the right of the File name mask box:

Mask Editor button.

Tip: You can sort saved masks in the Mask Editor by pressing **Alt** and using the **Up** or **Down** keys.

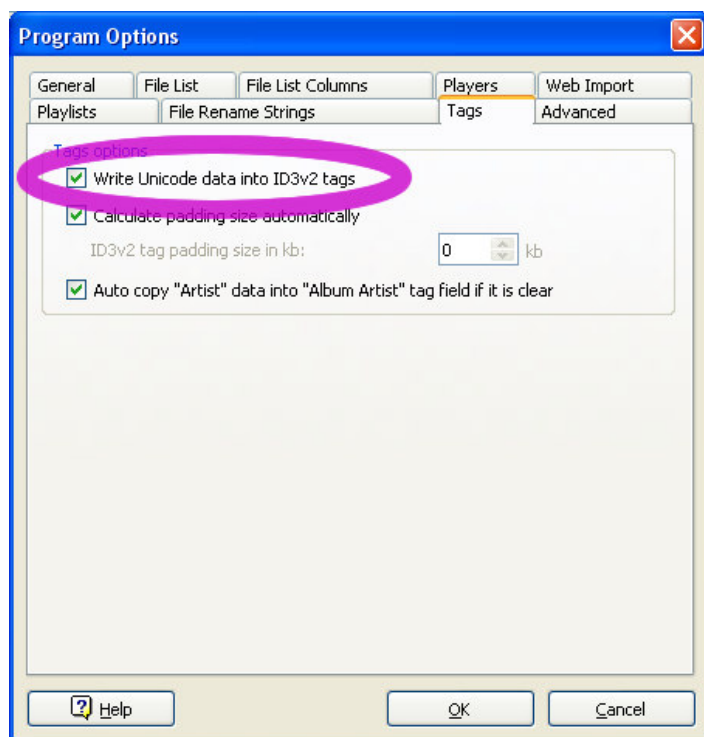

Tag&Rename Mask Editor.

Notes about Unicode support

Tag&Rename fully supports Unicode (tags, file names, drag and drop, etc.) on Windows 2000, XP, 2003 and Vista systems.

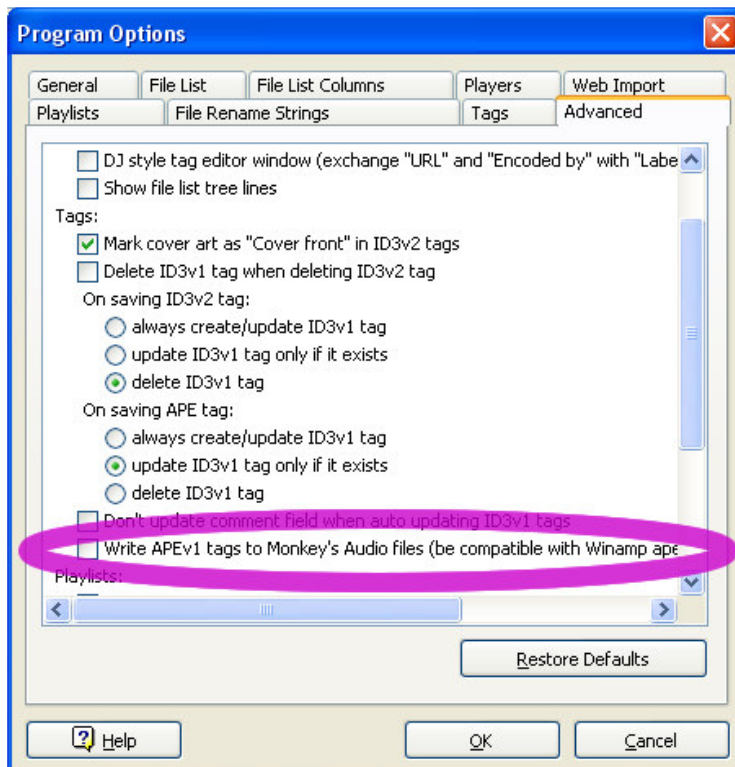

All tag standards except ID3v1, ID3v2 and APEv1 always save data in Unicode. ID3v1 and APEv1 tags don't support Unicode at all. ID3v2 tags can optionally save Unicode data.

If you have problems with saving Unicode data into mp3 (ID3v2 tags) files, please check the **Write Unicode data into ID3v2 tags** option. This option must be checked to save this way.

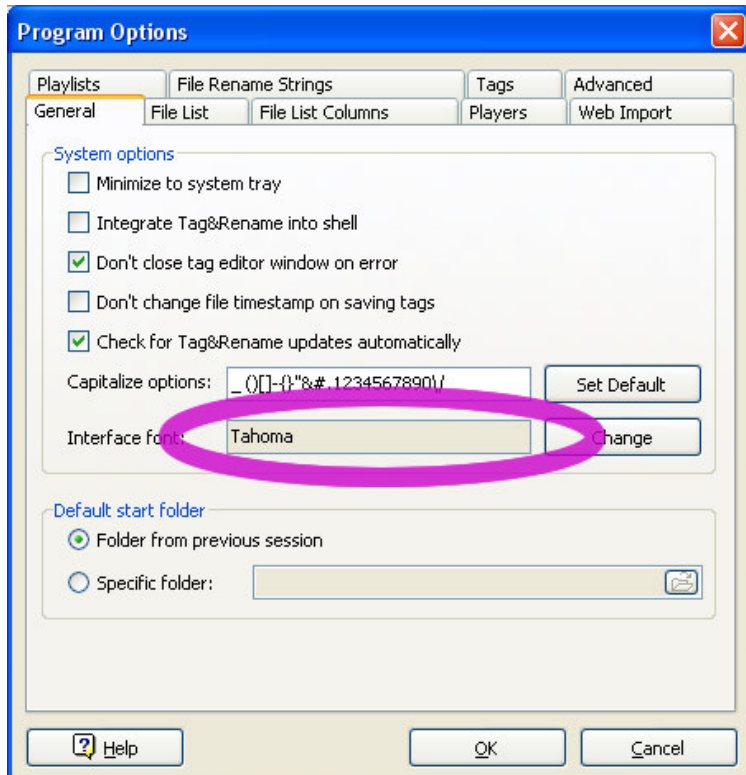

Tag&Rename Tags options.

If you need to save Unicode data into monkey's audio files, uncheck **Write APEv1 tags to Monkey's Audio files** option. This will force APEv2 tags (Unicode-supported) to be written into the files.

Tag&Rename Advanced options.

If you can't see Unicode data in the Tag&Rename file list, then be sure that the font currently being used by Tag&Rename supports Unicode data. You may need to change the Tag&Rename font in **Program Options -> General**.

Tag&Rename General options.

Running Tag&Rename on Virtual PC

Tag&Rename uses a third-party protection system which does not allow it to run normally on a Mac using Virtual PC.

Note that the following instructions are from the protection system developers. Tag&Rename developers do not have access to a Mac and Virtual PC and cannot verify this.

VPC from Microsoft is a Virtual PC on an Apple Macintosh. Using version 6.1 or greater on top of OS X, you need to do some things before installing or using Tag&Rename because VPC precompiles code to make the PC session run faster. This is not compatible with Tag&Rename.

To allow Tag&Rename to run correctly you need to do the following:

- Start the Virtual PC session as normal.
- In the Mac Finder, navigate to the 'Documents' folder in your 'Home' folder. Open the 'Virtual PC Scripts' folder.
- Open the 'Toggle Compatibility Mode' script by double clicking it.
- The script opens in Script Editor.
- Click the 'Run' button at the top of the script window.
- Click 'OK' to the informational dialog that appears.
- Click 'Enable' in the next dialog.
- Return to the PC session, which is now running in compatibility mode and will be slower, and run Tag&Rename as normal.
- When complete, close the program and return the Virtual PC to normal mode by re-running the script above and selecting 'Disable' at the appropriate time.

Tag&Rename keyboard shortcuts

Main window shortcuts	
F1	Program help
F2	Edit file or folder name
F4	Switch to rename files mode
Ctrl+F4	Switch to multi file tag editor
Shift+F4	Switch to get tag from file name mode

Space	Select current file (only if Use easy files selection option disabled)
Insert	Select file and insert next one (only if Use easy files selection option disabled)
Ctrl + Alt + W	Play current file in Winamp (Winamp2.x should be running)
Ctrl + Alt + Y	Add current file to Winamp play list (Winamp2.x should be running)

Tag&Rename configuration options

General

System options:

- **Minimize to system tray** – Hide Tag&Rename in the system tray when you minimize it.
- **Integrate Tag&Rename into shell** – Determines whether the Tag&Rename Explorer context menu is enabled or not.
- **Don't close tag editor window on error** – If Tag&Rename can't update a file tag, it will show an error message and won't close the editor window so you can try to save changes again.
- **Don't change file timestamp on saving tags** – Enable this option if you don't want to change the modified file's timestamp while editing tags.
- **Check for Tag&Rename updates automatically** – Tag&Rename will inform you when a new version has been released.
- **Capitalize options** – Specify symbols after which the program capitalizes the next letter, when the capitalize function is activated. To set up a default symbols string, click the **Set default** button.
- **Interface font** – Set the Tag&Rename interface font here (see also **Unicode notes**).

Default start folder:

Specify whether Tag&Rename should open the last-accessed folder or some other fixed folder when the program starts.

File List

Files selection:

- **Use easy files selection (like in MS Windows Explorer)** – When this option is enabled, file selection in the Tag&Rename file list works like in most programs: highlighted files = selected files. When this option is disabled, Tag&Rename shows checkboxes near file names, and only checked files are selected.

After open new folder:

Specify what Tag&Rename should do after it opens a folder.

- **Auto expand all folders** – Check this box if you want Tag&Rename to expand all subfolders in the playlist.
- **Files selection** – Specify which files will be automatically selected after a folder is opened.

View:

- **Use colors** – Check this option to see a colored file list. (Remember to select colors that you like.)
- **Color files with names longer than joliet standard** – Check this box to see colored files with names longer than 64 characters (limitation of joliet CDR/CDRW standard).
- **Show lines** – Enable/disable lines in file list. (Lines give the list a table-like appearance.)
- **Color files with low bitrate** – Check this box to see colored files with a low bitrate.

File List Columns

Columns – Specify which informational columns Tag&Rename shows in file list. Check the column(s) that you would like to be visible.

Players

If you don't want to use your default music player when playing files from Tag&Rename, you can change the default to a different player by clicking the button with the gray folder and browsing for the new player in the pop-up window. When you have located the player, double-click it and then click Open. The Winamp field is used to play mp3s from the **Winamp control** toolbar. Please note that **Winamp control** works with Winamp v2.x and v5.x only. (Winamp 3 is not supported.)

You will then see the directory path of your new player in the field next to the appropriate player. If you want to resume using your default player, simply clear the player field data.

Web Import

Freedb connection settings:

- **Freedb server** – Host address of the freedb server.
- **Get servers list** – Click this button to get a valid list of freedb servers.
- **Your e-mail** – You must fill in your e-mail address to use freedb.

Amazon.com import:

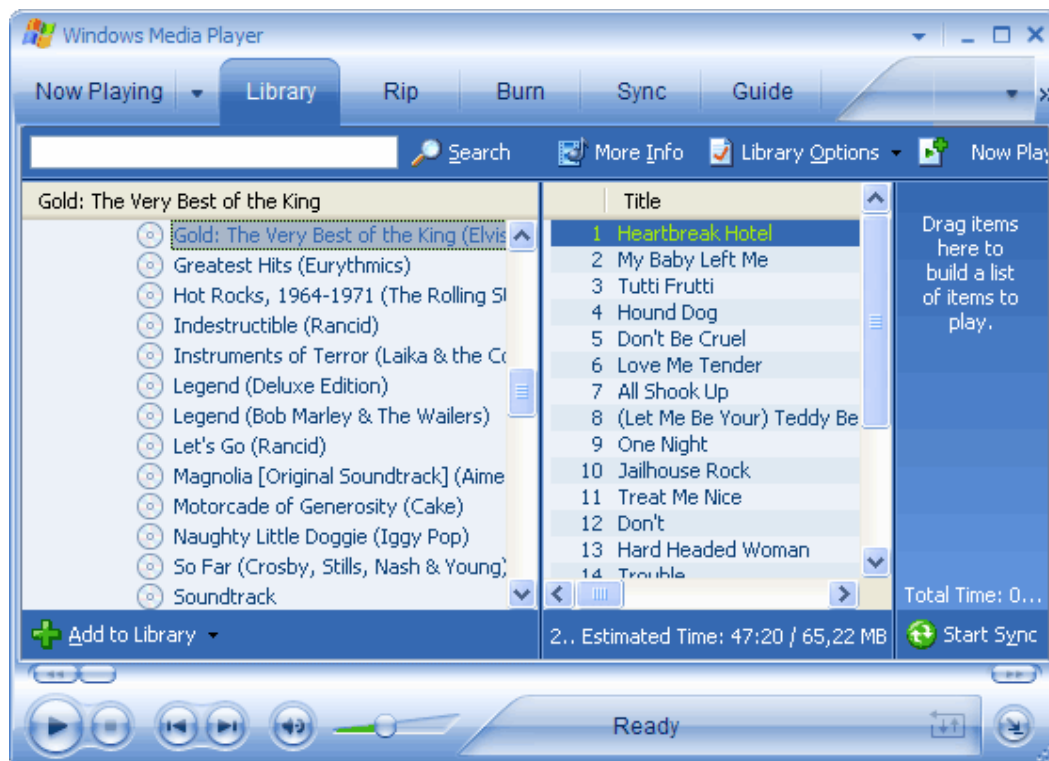

View file name options for cover art and review that you can save when importing information from amazon.com.

Proxy server:

If you are using a proxy server for your Internet connection, select its settings here.

Miscellaneous:

- **Save track information from freedb and amazon.com in xx/xx format** – Adds the total songs number to the tag track number field while importing.
- **Copy "Artist" data into "Album Artist" tag field while importing** – This option is strongly recommended if you are using Windows Media Player or Windows Media Center Edition because of the widespread use of the **Album Artist (formerly Orchestra or band)** field in its Media Library (see screen shot).

Windows Media Player with Media Library albums view. (You can see album artist in this view only if file tags have the Album Artist field filled.)

Playlists

Options:

- **Default playlist name** – Default file name that appears in the "Save files to playlist" dialog box when using the "save all" or "save selected" files to playlist commands.
- **Add EXTINF information into playlist** – Check to create extended m3u playlists (if you use Winamp or other player that supports EXTINF).
- **Save full file path into playlist**

Quick save playlist:

- **"Selected" and "all" playlist name** – Select and type in a name for the playlist Quick save options. You may use any text and/or variables listed at the bottom of the window.
- **Playlist folder** – Specify a folder where Tag&Rename will save all your playlists.
- **Show save message** – See the "Play list saved" confirmation pop-up window each time you do a Quick save playlist.

File Rename Strings

Word replacements:

Specify the words or letters that will be automatically replaced during file renaming.

Note: The Word replacements function is not case-sensitive.

Always keep case of these words:

Fill this table with words whose case must remain as you specify here.

Note: This option works only if you use Case in the Capitalize First Letter or Capitalize first word mode.
--

Tags

Tags options:

- **Write Unicode data into ID3v2 tags** - Note that some software does not support Unicode data in ID3v2 tags (some versions of Winamp, for example).
- **Calculate padding size automatically** - When Tag&Rename creates an ID3v2 tag, it will calculate the padding automatically (recommended).
- **ID3v2 tag padding size in kb** - Set the padding size for all files (only recommended for advanced users).
- **Auto copy "Artist" data into "Album Artist" tag field if it is clear** – Enable if you are using Windows Media Player.

Advanced

User interface:

- **Save tag "Comment" and "Encoded by" fields** – Save these fields upon exiting Tag&Rename.
- **Save focused field on "Save and next"** – When enabled, if you edit a file tag and click the **Save and next** button, Tag&Rename will show the tag of the next file and place the cursor in the last edited field. Otherwise, the cursor will be placed in the Title field.
- **DJ style tag editor window** – Exchange "URL" and "Encoded by" with "Label" and "Remixed by" in editor's first tab.

Tags:

- **Mark cover art as "Cover front" in ID3v2 tags**
- **Delete ID3v1 tag when deleting ID3v2 tag** – Automatically delete ID3v1 tag on ID3v2 tag deletion.
- **On saving ID3v2 tag** – Select what to do with an ID3v1 tag while changing an ID3v2 tag.
- **On saving APE tag** – Select what to do with an ID3v1 tag while changing an APE tag.
- **Don't update comment field when auto updating ID3v1 tags** – Don't update an ID3v1 comment field when Auto updating an ID3v1 tag after changing an ID3v2 or APE tag.
- **Write APEv1 tags to Monkey's Audio files** – Set this option if you are using Winamp Monkey's Audio plugging (which does not support APEv2 tags).

Playlists:

- **Save playlists in .m3u8 (UTF8 encoded format)** – Save all playlists in .m3u8 format instead of .m3u format.

Quick save playlist:

- **Case** – Setup playlist name case options.
- **Replace spaces by underscores** – Select to generate playlist names like Artist_-_Album.m3u

License and warranty

License agreement:

You should carefully read the following terms and conditions before using this software.

Registered version:

One registered copy of Tag&Rename may either be used by a single person who uses the software personally on one or more computers, or installed on a single workstation used non-simultaneously by multiple people, but not both.

Evaluation and registration:

This is not free software. Subject to the terms below, you are hereby licensed to use this software for evaluation purposes without charge for a period of 30 days. If you use this software after the 30-day evaluation period a registration fee of \$29.95 is required. When payment is received you will be sent an unlock key for the latest version of Tag&Rename.

Unregistered use of Tag&Rename after the 30-day evaluation period is in violation of U.S. and international copyright laws.

Disclaimer of warranty:

THIS SOFTWARE AND THE ACCOMPANYING FILES ARE SOLD "AS IS" AND WITHOUT WARRANTIES AS TO PERFORMANCE OR MERCHANTABILITY OR ANY OTHER WARRANTIES WHETHER EXPRESSED OR IMPLIED.

Distribution of evaluation version:

Provided that you verify that you are distributing the evaluation version (select About from the Tag&Rename main menu to verify), you are hereby licensed to make as many copies of the evaluation version of this software and documentation as you wish; give exact copies of the original evaluation version to anyone; and distribute the evaluation version of the software and documentation in its unmodified form via electronic means. There is no charge for any of the above.

You are specifically prohibited from charging, or requesting donations, for any such copies, however made; and from distributing the software and/or documentation with other products (commercial or otherwise) without prior written permission.

Order Tag&Rename

Trial versions of Tag&Rename have limitations: a nag screen and 30-day trial period.

If you decide to keep Tag&Rename thereafter, you must register and pay the registration fee of \$29.95. Registration benefits are no nag screen at startup, FREE upgrades to all new 3.x versions, and product notification by e-mail.

How to order:

You can order your copy of Tag&Rename for only \$29.95 using one of the following:

1. Through the World Wide Web. This is the fastest and easiest way. The ordering page is on a secure Netscape Commerce Server, ensuring that your information remains confidential. For details on ordering Tag&Rename through the Web, please go to the Tag&Rename register page at: http://www.softpointer.com/tr_purchase.htm and follow the link "Order the Fully Licensed version of Tag&Rename". After completing the order, you will receive registration information immediately.
2. If you don't have convenient Web access, you may order Tag&Rename by fax (also using a credit card) or phone (toll-free). In addition, you can use cheque or money order. The order form, fax and phone numbers, and mailing address are in the file "OrderForm.txt" included with Tag&Rename.

Upon payment approval (usually one or two business days), we will send you the registration key which will remove all limitations of the unregistered version such as nag screens and 30-day trial period. Your registration will be valid for all future 3.x versions of Tag&Rename.

Important: When filling out the order form, please double-check that your e-mail address is correct. If it is not, we will be unable to send you the registration code.

Technical support

Before you contact us, please do the following:

- Be sure that you have followed procedures as described. We all make mistakes sometimes. Recheck what you have done or tried.
- Look at the Help file. It may already contain an answer to your question.
- Visit the Tag&Rename home page at <http://www.softpointer.com/tr.htm>. You may find a newer version of Tag&Rename there. If a serious bug has been found in the program, but the new version is not ready yet, we may make a quick fix for it.

If you still have a problem with Tag&Rename, please contact technical support via e-mail at:

tag-rename@softpointer.com

Please provide us with the following:

- Tag&Rename version (from the "About" menu item dialog)
- Tag&Rename serial number (if you're a registered user)
- Windows version (including service packs and other fixes installed)
- Computer information: CPU type and speed, installed memory
- Description of your problem (as much information as possible to help us reproduce the problem)

Tag&Rename FAQ

Functionality:

Is it possible to add a graphics file to more than one file?

- Yes. You need to select the files in the Tag&Rename file list (according to "Use easy files selection" option settings) and click the "Edit all supported tag fields" button in "Multi file tag editor" tab. In the opened window, you can change any tag frame (including cover) in this group of files.

Can Tag&Rename tag files (Artist, Album, Title) based on the file path? For example I have the following folders structure: <ARTIST>\<ALBUM>\<Track - Title>.

- Yes. Using your example (<ARTIST>\<ALBUM>\<Track - Title>) you need to use this file name mask: %1\%3\%6 %2

In Windows Media Player 10 there is a tag called "Album Artist". This tag is very vital when you are using Windows XP Media Center 2005. You can set the tag in WMP10, but I cannot find it in Tag & Rename. Where is it?

- You can find this tag field in the Tag&Rename Tag Editor window's "Additional" tab. Also see the "Copy "Artist" data into "Album Artist" tag field while importing" option in "Program options" -> "Web Import", and the "Auto copy "Artist" data into "Album Artist" tag field if it is clear" in "Program options" -> "Tags".

Can I convert ID3v2 tags in my files to Unicode with Tag&Rename?

- Yes. See the "Program options" -> "Tags" -> "Write Unicode data into ID3v2 tags" option. To convert existing tags to Unicode (or to plain text), select the file(s) in the Tag&Rename file list and click the "Save Tags" button in "Multi files tag editor" tab with all its checkboxes unchecked. This will resave tags without changing their data according to the "Write Unicode data into ID3v2 tags" option settings.

Why can't I submit CD information to freedb in Tag&Rename?

- Since Tag&Rename loads freedb information without an original CD, it calculates the freedb disc id from music files. The calculated id is only an approximation which is close enough for finding album info. For submission, you need to have the original audio CD, so you should use software audio CD players or CD rippers for freedb submissions.

Problems:

I ran Tag&Rename, but none of the "Tools" program features are functioning. They're all grayed. How do I enable them?

- First select files (according to "Use easy files selection" option settings) in the Tag&Rename file list for which you want to do some "Tools" operation. Then all the functions will be enabled automatically.

When I run Tag&Rename, it shows a splash screen and then closes without showing any error message. What can I do?

- Tag&Rename cannot run on Windows XP SP2/2003 systems with enabled DEP (Data Execution Protection) and processors with hardware DEP support. To run Tag&Rename on such systems you first need to disable DEP.

After I edit mp3 file tags with Tag&Rename some programs can't show this tag at all or show it incorrectly. (Tag&Rename shows tag data ok.) What can I do?

- Most likely these programs can't read Unicode tags. See Tag&Rename options -> "Tags" -> "Write Unicode data into ID3v2 tags" and uncheck this option. To resave tags without Unicode, select files in the Tag&Rename file list and click the "Save tags" button on the "Multi file tag editor" tab. This will rewrite tags and remove Unicode data from them. (See also the "Notes about Unicode support" topic in program help.)

I try to use Tag&Rename with files which contain Unicode data in file names and tags. However, when I looked at this files, Tag&Rename only displays the pipe symbol, e.g. | | | | | | | | | |.mp3. Any suggestions?

- The font used in Tag&Rename doesn't have characters for this language, so go to "Program options" -> "General" -> "Interface font" and change it to a font which supports this language. If you have MS Office installed, then change it to "Arial Unicode MS". This font has support for most languages.

I changed tags in my mp3/m4a files using Tag&Rename, but it seems that iTunes doesn't support these changes. In iTunes I still see old information. Why?

- iTunes has its own database and looks into file tags only when you add it to iTunes and play this file, so it will update tag changes while playing. Optionally, you can do the following:
 1. In iTunes, select all your files.
 2. Right click on them and select "Get Info". (This will open iTunes multi file tag editor.)
 3. Don't check any checkboxes or change anything - just click the "Ok" button and iTunes will reread tags from selected files.

Why is it that when I change the MP3 tags, they don't change in Windows Media Player?

- You need to update Media Player's "Media Library":
 1. Go to Media Player main menu -> "Tools" -> "Search for media files...".
 2. In search options, select a folder with your music files and "Never files and all existing files in library".
 3. Click the "Search" button.

I renamed some songs in Tag&Rename but it changed their names back after a few minutes of playing them through my media player. How I can keep the new names for this files?

- Most likely your files were renamed by your media player.
- For Windows Media Player, go to the Media Player main menu -> "Tools" -> "Options" -> "Media Library" -> "Automatic media information updates for files" -> "Rename and rearrange music using media information" checkbox and uncheck it, if it is checked.

- For iTunes, go to the main menu -> "Edit" -> "Preferences" -> "Advanced" -> "Keep iTunes music folder organized" checkbox and uncheck it, if it is checked.

When I try to use amazon.com or freedb I get the following message: "Cannot resolve host, error 2". It happens even when I'm online. What can I do?

- There may be two reasons:
 1. If you are using firewall software, be sure that it allows Tag&Rename to go to the Internet.
 2. If you are using a proxy server, you may need to set it up in "Program options" -> "Web import" -> "Proxy server".

Each time I tag an album, my disk space is reduced by the size of the album as if it was copied or doubled or something. I want to erase those temp files. How can I do it?

- Most likely this problem occurs because you have enabled Windows XP "System Restore" functions on the drive with your mp3 files. When you add ID3v2 tags to mp3 files the first time, Tag&Rename needs to rewrite all file data since an ID3v2 tag is placed at the beginning of the file. While doing this, Tag&Rename writes to a temporary file and overwrites the original file with it. A "System Restore" enabled Windows machine does not delete these files; it just moves them into the "System Volume Information" folder. You can disable "System Restore" functions in "Control Panel" -> "System" -> "System Restore" tab.
